Target version: TTDPatch 2.6	

Description

Original Author: XeryusTC
TTDPatch Version: V2.6 Alpha 0 r1478
Patch Feature: Variable Action 2

When building the Berlin station with the "attached" GRF the station will display only one kind of tiles, here is how to reproduce:

- Follow the instructions in the readme (see the bottom of this bug report)
- Make the main station really long (6+7 or something similar)
- Shorten the station by using ctrl+dynamite tool

The station should now only display one kind of tile type. I've only been able to reproduce this when the plaza rows were build next to the station itself. I've also only been able to produce this bug in TTDPatch and not in OpenTTD.
It seems that the bug is related to var 0x41 and var 0x47.
